

2.  $\text{RATE} \sim \left| \frac{1}{p^2 - M^2 + iM\Gamma} \right|^2 = \frac{1}{(p^2 - M^2)^2 + M^2\Gamma^2}$

$(M\Gamma)^2$  controls the width of this bump

$M\Gamma \sim (10 \text{ GeV})^2$

3.  $\Gamma_{\text{PDG}} = 2.5 \text{ GeV}$

$\uparrow 2.5 \text{ GeV} \times 100 \text{ GeV} = 40 \text{ GeV}$

not bad.

4.  $[\Gamma] = 1 \rightarrow \boxed{t = 1/\Gamma}$   $\leftarrow \begin{array}{l} 1/\Gamma \text{ is a time scale.} \\ \text{IDENTIFY IT W/} \\ \text{LIFETIME} \end{array}$

$\approx \boxed{\frac{1}{2.5 \text{ GeV}}}$
